

Wyeth Medica Make Health & Safety A Priority by Implementing TDS' Revolving Doors & High Speed Barriers

Working together with Wyeth since 2002, TDS successfully implemented an innovative integrated Security Management System at the Wyeth Medica plant in Newbridge, Co. Kildare. The TDS integrated solution caters for the following key requirements:

- 1). Access Control
- 2). Time & Attendance Management
- 3). Contractor & Visitor Management
- 4). ID Card Production
- 5). Emergency Headcounting
- 6). Alarm Monitoring

Wyeth Medica Ireland (WMI) was established in Newbridge, Co. Kildare in 1992. The plant employs over 1,400 people in a facility of over 1,000,000 sq ft. WMI manufacture over 140 products to treat and help prevent some of the world's most serious health problems.

Wyeth have recently implemented TDS' revolving doors and high speed barriers to integrate with their **CoreAccess** solution to provide complete perimeter access control.

Wyeth selected Kaba's Geryon Revolving Doors to meet their requirement to monitor onsite access. The revolving doors will provide a high level of security to unmanned entrances of the Wyeth Newbridge site. The Geryon doors are activated by means of Kaba's Wyeth standard card readers which are fully integrated with TDS' Enterprise Wide Access Control system.

The Kaba High Speed Barriers selected by Wyeth are sensor-monitored channels with automatic waist-high swing doors. Access authorisation is provided efficiently and effectively without impeding onsite operations. The bi-directional doors provide for swift entry / exit, even with bags or luggage. The doors close automatically as soon as the authorised person has passed through to prevent any tailgating.

The recent implementation of revolving doors and high speed barriers provides Wyeth with a seamless and unobtrusive solution to all Wyeth's site security and safety needs. With its 'Total Access' strategy, the **CoreAccess** solution satisfies Wyeth's requirement for controlled, high secure access combined with maximum ease of use and aesthetic appeal.

With the implementation of these physical barriers, Wyeth now have an accurate onsite emergency headcount which fulfill the company's Health & Safety obligation. As personnel enter or exit the site, a headcount screen is automatically updated, which is fully integrated with Wyeth's fire / evacuation alarms. ensuring emergency services are given a correct missing list in the event of an emergency.

Project Management

To implement the project, a joint project team was formed of TDS Kaba specialists and Wyeth staff. The TDS' Implementation Methodology was adopted which structured the entire implementation process and ensured the end users took a positive approach to the installation from the start.
