## Press Release – 30<sup>th</sup> November 2010

### TDS Secures Pope Benedict XVI Visit to London

TDS launched their high-tech CCTV services division in 2009, offering tailored CCTV solutions designed to meet the unique requirements of individual organisations with full integration capabilities into Access Control. TDS' CCTV division provides full maintenance services on existing CCTV installations enabling us to provide our customers with significant cost savings and a single maintenance contract on all installed security systems.

TDS recently deployed their CCTV solution for Pope Benedict XVI visit to London; this lucrative CCTV contract was awarded to TDS following a comprehensive tendering process.

This contract had an exceptionally short timescale from award to implementation stage and significant operational requirements due to the high level of security required. The attendance of key political figures for the Pope's speech also added to the heightened security requirements.

TDS implemented state-of-the-art Samsung Dome and Fixed Cameras to cater for the unique requirements. The legacy fiber network was enhanced to cater for the new CCTV system, enabling the video transmission to link in with the existing CCTV infrastructure in the remote site monitoring station, whereby it was integrated with the Front End and the DVR system for detailed post analysis.

This contract further strengthens TDS' position as a provider of integrated security solutions.
