Press Release – 2<sup>nd</sup> November 2007

## DHL's New Hub Utilises State-of-the-Art Access Control Technology from TDS

DHL Express have opened its new purpose-built hub in Dublin Airport Logistics Park and implemented **CoreAccess**, **Core GateWatch** and **CoreSIP** to cater for their extensive Access Control and Security requirements at the state-of-the-art facility.

DHL Express is the market leader in the express and logistics industry. The purpose-built hub, which is located on a 13 acre site, utilises the latest state-of-the-art technology including a highly sophisticated automated sortation system which contains over 700 meters of conveyors and is capable of handling up to 7,000 parcels per hour. The facility will be the focal point for all DHL's international air express, road express and domestic delivery services.

The **CoreAccess** solution was selected to increase overall security, enforce on-site health and safety and ensure ease of movement across the site whilst maintaining required security levels. DHL selected the integrated Kaba Access Control devices to control, monitor and restrict the moment of people and vehicles in, out and around the site.

A key feature of the proposed solution was the deployment of the **Core GateWatch** solution, which provides for the efficient and safe management of lorry drivers coming onsite. The fully integrated **Core GateWatch** system automatically identifies the vehicles with a long distance range of up to 10 metres, enabling reliable fast identification and eliminating congestion at the barriers.

The **CoreSIP** (Safety Information Panel) was deployed in the reception area to provide visibility for DHL's employees and visitors of the company's commitment to onsite health & safety procedures. Furthermore, the deployment fulfils DHL's legal health & safety obligations.

This contract further strengthens TDS' position as a leading provider of Access Control solutions to leading multinationals and demonstrates our commitment to providing the latest in technology solutions.
