Press Release –18th March 2009

Gilead Sciences

Gilead Sciences Extend TDS' CoreAccess Solution to their new Plant Extension

Gilead Sciences have extended TDS' CoreAccess solution to their new plant extension in Co. Cork

Gilead Sciences is a biopharmaceutical company with more than 2,500 employees which operates in North America and in several countries throughout Europe and Australia. Gilead's manufacturing facility in Ireland is responsible for quality control release, packaging and distribution of the company's liposomal products to Europe and other international locations.

Gilead initially implemented the **CoreAccess** solution in 2005 to meet their heightened security requirements and to restrict access to the premises. This solution monitors and controls the physical access for employees, visitors and contractors alike.

The **CoreAccess** solution was recently deployed in Gilead's new state of the art extension to provide controlled and secure access to and within the plant. The **CoreAccess** solution secures access in the warehouse by monitoring roller doors and in the packaging area by means of interlock functionality. The solution fully integrates with Gilead's existing locks.

The deployment of Rack Mounted Controllers enables these units to be installed in the secure IT Cabinets in Gilead's Comms Room.

This contract further strengthens TDS Ltd's position as a premium provider of cutting edge solutions to leading organisations.
