Press Release – 29th April 2009

LEO Pharma

Leo Pharma Upgrade to CoreAccess 15.3.1

Leo Pharma upgrade to **CoreAccess** 15.3.1 to benefit from new functionality, updated screens and optional features in the latest **CoreAccess Enterprise Wide** version.

In 1960 Leo Pharma manufactured and exported their first medicines from their newly acquired premises in Dublin 12 to the United Kingdom. Leo Pharma continued to expand their operations in Ireland throughout the 1980's & 1990's and currently employ 370 personnel in the company's Dublin and Little Island, Cork sites.

A key feature for the company is the reduction in paper based files; the latest version enables Leo Pharma's files to be stored electronically against a person's records, thus reducing storage and administration costs. These documents can then be easily called up and exported from their database reducing this otherwise time consuming filing process for Leo Pharma's administration staff.

In addition, the new bulk deletion functionality enables Leo Pharma to delete inactive records. The bulk deletion menu is set to delete inactive records after no activity has been present for a specific length of time, pre-determined by Leo Pharma. This functionality enhances the company's onsite security and keeps the company's database working at full capacity and avoids it from getting too large with unused records.

The latest **CoreAccess** Version 15.3.1 also includes additional functionality to existing **CoreAccess** screens including the enhancement of the security clearance screen, greater flexibility with BI reporting, reset PIN functionality, DOB searches and user friendly reporting capabilities.

The release of the latest **CoreAccess** version (15.1.3) further demonstrates TDS' commitment to continually providing our customers with the most up-to date technology.
