Press Release – 20th May 2010

Shannon Airport Authority

Shannon Airport Extend TDS' CoreAccess Aviation Edition

Shannon Airport have extended TDS' CoreAccess Aviation Edition to their new State of the Art CBP (Customs and Border Protection) Extension

Shannon Airport is part of the Dublin Airport Authority plc (DAA); principal activities include airport management, operation and development, domestic and international airport retail management and airport investment. Shannon Airport is the first airport in the world, outside of the Americas, to offer US Customs and Border Protection (CBP) preclearance facilities to airlines travelling to the USA.

Shannon Airport initially implemented the **CoreAccess Aviation** solution in 2005 to meet their heightened security requirements, along with Dublin & Cork Airport's. The extension of the solution to the CBP Area will provide Shannon Airport with a single integrated solution for controlling and monitoring the movement of passengers and staff within the Airport.

The deployment encompasses 70 control points across the CBP Area including doors, boarding gates, and high security communication rooms utilising the latest **Kaba** Reader Technologies.

The solution will also extend the use of biometric technology to control staff movement at all high secure Airport locations and the deployment of Rack Mounted Controllers enable the units to be installed in the secure Comms rooms.

This contract further demonstrates the ability of TDS to provide innovative and effective solutions to cater for the high security and operational demands of Airports.
